DETAILED ACTION

1. This office action is responsive to communication filed on July 11, 2007. Claims 1-27 are pending in the application and have been examined by the Examiner.

Allowable Subject Matter

2. Claims 1-27 are allowed.
3. The following is an examiner's statement of reasons for allowance:

With regards to independent claims 1, 14 and 27, the closest prior art(Voronov et al., US 2003/0174772) teaches of capturing and analyzing first frames having a first resolution(low resolution) until a scene change is detected, and capturing second frames having a second resolution(high resolution) greater than the first resolution when the scene change is detected(see paragraphs 0068 and 0069). Voronov et al. further teach of zooming(i.e. performing a focus adjustment) in on a moving subject after a scene change has been detected(paragraph 0069).

However, Voronov et al. fail to teach or reasonably suggest capturing both first and second frames when a scene change has been detected, performing both coarse and fine focus adjustments based on the first and second frames when a scene change has been detected, or performing any type of exposure adjustments based on the first and/or second frames. Thus, these features are patentable over Voronov et al. alone, and would not have been obvious contributions by a person having ordinary skill in the art at the time of the invention to the surveillance camera taught by Voronov et al.

Claims 2-13 are allowable due to being dependent upon the allowed claim 1.

Claims 15-26 are allowable due to being dependent upon the allowed claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stavely et al.(US 2004/0233282) teach of capturing low resolution images until a scene change has been detected, capturing high resolution images when a scene change has been detected, and zooming(i.e. performing a focus adjustment) in on a moving subject when the scene change has been detected(See figures 5A-7B, paragraphs 0035-0054).
